CREATE WORDPRESS SITE USING WPCLI

Please refer to the video lectures for more detailed information

Please ensure commands are executed in your sites /public_html directory:

```
wp core download

wp core config --dbname= --dbuser= --dbpass= --dbprefix=

wp core install --url= --title='' --admin_user= --admin_password= --admin_email=
```

You need to add the following after the equals sign:

wp core config: the database name, database user, database user password and the prefix.

wp core install: the site url, the site title, the admin username, the admin password and the admin email address.

```
wp core install --url= --title='' --admin_user= --admin_password= --admin_email=
```

Please make a note of the site url, It's important when configuring nginx 301 redirects.
